

FRONT LOAD LOCATOR DEVICE

Front load locator device acc. ANSI/BIFMA X5.1

Appendix D and ISO 7173 draft for quick assembly to the ISO-RIG.

This optional feature may be used for locating the point for Front Stability when it is difficult to determine the 60 mm load point from the front center edge of the load bearing surface of the seat. Often this is difficult to accomplish with upholstered seatings and this feature offers a consistent method.
